

## GetYourSlot:

GetYourSlot is an EventScheduler Program , It consist of two applications “server-side” and “client-side” , following are the features I am currently implementing , I will add more if time allows-

- Login/Signup-Maintaing a database with user information and accepting request from and validating them and taking actons.
- Addition and deletion of venue and slots – server side application provides this facility where admin acn add details of new venues in the database and creatng new table for sllotting details.
- Booking of venues – Sending booking request to client for a venue and taking actions on the first come first serve basis.
- Blocking user groups – Maintaing a table in database which contains one to one mapping of venue and blocked user .
- Single booking in a day – Storing last booking time for every user and checking whether he is allowed to make a request.
- Invite-On creation of an event user can send invite to other users and I am making a databse entry wether invite is accepted or not.
